DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-15, drawn to a method and apparatus for dehydrating and disentangling cloth a plurality of times.

Group II, claim(s) 16-28, drawn to a ventilating structure for a washing machine performing a semi-drying operation.

2. The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

3. The technical feature of: a washing machine for performing a semi-drying operation in which dehydration and disentanglement of cloth in the washing tub are repeated plural times to dehydrate the cloth to a designated degree, is common to Claims 1, 14, 16, and 27. However, there is a lack of unity a posteriori since all of the technical features common to all the independent claims are anticipated by Hirooka et al. (US Patent No. 4,843,671). Hirooka et al. discloses a washing machine (abstract, line 2) for performing a semi-drying operation (“dehydrating operation” column 3, line 13) in which dehydration and disentanglement of cloth in the washing tub are repeated plural times (column 3, line 16) to dehydrate the cloth to a designated degree.

Art Unit: 4118

4. The special technical feature of group I, a washing machine where the washing tub is rotated at an increasing dehydration speed, is not shared by group II. The special technical feature of group II, a door provided with ventilating holes, is not shared by group I.

5. Lack of unity of invention may be directly evident “a priori,” that is, before considering the claims in relation to any prior art, or may only become apparent “a posteriori,” that is, after taking the prior art into consideration. For example, independent claims to A+X, A+Y, X+Y can be said to lack unity a priori as there is no subject matter common to all claims. In the case of independent claims to A+X and A+Y, unity of invention is present a priori as A is common to both claims. However, if it can be established that A is known, there is a lack of unity a posteriori, since A (be it a single feature or a group of features) is not a technical feature that defines a contribution over the prior art.

6. A telephone call was made to Daniel Kim on February 5, 2009 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the

Art Unit: 4118

currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
